DESIGN OF THERMAL EQUIPMENT
(Elective-II)

Course Code: 13ME2315

L	**P**	**C**
4	**0**	**3**

Course Outcomes:

At the end of the course, the student will be able to

CO1. Classify and design heat exchangers
CO2. Estimate convective heat transfer in ducts, concentric annuli, circular pipes.
CO3. Determine pressure drop and effect of fouling in heat exchangers.
CO4. Design double pipe heat exchangers and compact heat exchangers by considering fin effects.
CO5. Design condensers and evaporators for application in refrigeration and air-conditioning.

UNIT-I

Classification of heat exchangers: Tubular heat exchangers, plate heat exchangers, extended surface heat exchangers – flow arrangements – applications.

Basic design methods of heat exchangers: Overall heat transfer coefficient – multi pass and cross flow heat exchangers - log mean temperature difference method – effectiveness-NTU method for heat exchanger analysis–heat exchanger design calculation–heat exchanger design methodology.

UNIT-II

Correlations for forced convection heat transfer coefficients: Laminar forced convection in ducts and concentric annuli – turbulent forced convection in circular pipes – heat transfer in helical coils and spirals – heat transfer in bends.

UNIT-III

Heat exchanger pressure drop and pumping power: Tube side pressure drop in laminar and turbulent flows – pressure drop in helical and spiral coils – pressure drop in bends and fittings.

Fouling of heat exchangers: Basic considerations – effect of fouling and heat transfer and pressure drop – aspects of fouling – design of heat exchangers subject to fouling.

UNIT-IV

Double pipe heat exchangers: Pressure drop – hydraulic diameter – hairpin heat exchanger – parallel and series arrangements of hairpins – total pressure drop.

Compact heat exchangers: Plate-fin heat exchangers – tube-fin heat exchangers – pressure drop for finned-tube heat exchangers – pressure drop for plate-fin heat exchangers.

UNIT-V

Condensers and evaporators: Horizontal shell-and-tube condensers – horizontal in-tube condensers – plate condensers – air-cooled condensers, thermal design of shell-and-tube condensers – design and operational considerations.
