

**EMBEDDED PROCESSORS
(ELECTIVE- II)****Course Code: 13CS2113****L P C
4 0 3****Course Outcomes:**

At the end of the course, a student will be able to:

CO1: Outline INTEL 8051 Architecture and its peripherals.

CO2: Describe PIC Architecture and utilize its instruction set.

CO3: Describe ATMEGA Architecture.

CO4: Utilize ATMEGA instruction set in controlling peripheral systems.

CO5: Explain serial communication buses.

UNIT-I

Introduction to Classic 8051 family Architecture. Address and data bus with multiplexed I/O pins. Registers Examples with arithmetic and Boolean instruction set. Applications using Timers Counters and I/O programming for external logic sensing and control. Interrupts and its programming. This is an example of Van Neumann Architecture.

UNIT-II

Introduction to the advanced Harvard architecture for faster instructions. Introduction to PIC family Architecture and instruction set. Introduction to the shorter RISC instruction set and its usage with example programs. Interrupts using change of state on ports and its use in all application programming.

PERIPHERAL SYSTEMS IN PIC 16F877A PROCESSOR.

(a) Digital Input and Output Programming,

(b) Timers and Counters

(c) Capture Control and PWM

(d) Analog to Digital Converters and their Programming

(e) Simple data acquisition systems and programming.

UNIT-III

Introduction to Atmega processor with a large register set. Atmega architecture exposes Accumulator free programming, with advanced addressing modes and faster Cache memory controlled I/O . Programming using the popular using the popular Atmega 8535 processor and instruction set. The versatile peripherals and their applications in 8535. Interrupts and Its Programming Logical sequence of steps to design a program to suit an objective. Examples in Robotics, Motor control, Display control will be exposed.

UNIT-IV

Peripheral systems in Atmega 8535

- (a) Digital Input and Output Programming
- (b) Timers and Counters wave form generation.
- (c) Capture Control and PWM
- (d) Analog to Digital Converters and their Programming
- (e) Simple data acquisition programming.

UNIT-V

Serial Communication busses

- (a) USART, with addressable feature
- (b) SPI bus
- (c) I2C two wire bus
- (d) Introduction to USB bus
