

## **JET and ROCKET PROPULSIONS**

(Elective-I)

**Course Code: 15ME2307**

<b>L</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>3</b>

**Course Outcomes:** At the end of the course, the student will be able to

- CO1:** Explain the working of jet engines and rocket propulsion systems.
- CO2:** Describe liquid propellant rocket engines.
- CO3:** Discuss solid propellant rocket engines and explain rocket motor design approach.
- CO4:** Classify solid propellants and discuss the characteristics.
- CO5:** Explain the working of hybrid propellant rockets and select the process for rocket propulsion systems.

### **UNIT-I**

(10-Lectures)

Ramjet engine, pulse jet engine, turboprop engine, turbojet engine, thrust and thrust equation, specific thrust of turbojet engine, specific thrust of the turbojet engine, efficiencies, parameters effecting the flight performance, thrust augmentation.

Duct jet propulsion, rocket propulsion, chemical rocket propulsion, nuclear rocket engines, electric rocket propulsion, applications of rocket propulsion-space launch vehicles, spacecraft, missiles and other applications.

### **UNIT-II**

(10-Lectures)

Liquid propellant rocket engine-propellants, propellant feed systems, gas feed systems, propellant tanks, tank pressurization, turbo pump feed system and engine cycles, flow and pressure balance, valves and pipe lines, engine support structure.

Liquid Propellant properties, liquid oxidizers, liquid fuels liquid monopropellants, gelled propellants, combustion process, analysis, combustion instability.

**UNIT-III** (10-Lectures)

Solid propellant rocket engine - propellant burning rate, basic performance relations, propellant grain and grain configuration, propellant grain stress and strain, attitude control.

Motor case – metal cases, wound –filament –reinforced plastic cases, nozzles- classification, design and construction, heat absorption and nozzle materials, rocket motor design approach.

**UNIT-IV** (10-Lectures)

Solid propellants-classification, propellant characteristics, propellant ingredients, smokeless propellant, igniter propellants, physical and chemical processes, ignition process, extinction or thrust termination, combustion instability.

**UNIT-V** (10-Lectures)

Hybrid propellant rockets - applications and propellants, performance analysis and grain configuration, combustion instability. Rocket propulsion systems - selection process, criteria for selection, interfaces.
