

## SCHEME OF COURSE WORK

### Course Details:

<b>Course Title</b>	: Optimization Methods in Engineering		
<b>Course Code</b>	:15ME2104	<b>L P C</b>	3 - 0 - 3
<b>Program:</b>	: M.Tech.		
<b>Specialization:</b>	: CAAD		
<b>Semester</b>	. 1 <sup>st</sup>		
<b>Prerequisites</b>	:		
<b>Courses to which it is a prerequisite</b>	:		

### Course Outcomes (COs): The student will be able to

CO-1	Solve optimization problems using classical optimization techniques
CO-2	Solve simple non-linear multivariable optimization problems
CO-3	Solve optimization problems using geometric programming
CO-4	Explain the working of different operators used in genetic algorithms for optimization
CO-5	Explain concepts of stochastic programming & select a suitable technique for a specific engineering problem

### Program Outcomes (POs): A postgraduate of CAAD will have the

PO-1	Ability to apply fundamental principles in the areas of analysis & design of mechanical components & systems
PO-2	Ability to apply creative and innovative skills in the area of mechanical design
PO-3	Ability to identify, formulate and solve complex mechanical design problems
PO-4	Ability to carry out the research related to computer aided analysis and design
PO-5	Knowledge of advanced modeling and analysis tools
PO-6	Ability to function in multidisciplinary teams during collaboration with educational institutions, industry and R&D organizations
PO-7	Ability to apply knowledge of the engineering, financial and management principles to execute projects
PO-8	Ability to effectively convey technical material through oral and/or written communication
PO-9	Recognition of the need for and ability to engage in lifelong learning
PO-10	Understanding of professional and ethical responsibility
PO-11	Ability to conduct a thorough survey and analyze critically to plan, design, and test components and systems implementing new thoughts

### Course Outcome Versus Program Outcomes:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
CO-1	S			M							
CO-2			M	M							
CO-3	M						M				
CO-4	M						M				
CO-5			S	M							

*S* - Strongly correlated, *M* - Moderately correlated, *Blank* - No correlation

<b>Assessment Methods:</b>	Assignment / Seminar / Test / End Exam
----------------------------	--

## Teaching-Learning and Evaluation

Week	Topic / Contents	Course Outcomes	Sample questions	Teaching-Learning Strategy	Assessment and Schedule
1	Basic principles of optimization Classification of optimization methods, Classical optimization techniques -Single variable optimization methods	CO-1	<ul style="list-style-type: none"> <li>▫ Explain the following terms: Design Vector, Design constraint</li> <li>▫ Find the maxima and minima of given function <math>f(x)</math></li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12)
2	One dimensional unconstrained optimization: Unimodal function, Bisection method, Quadratic search,	CO-1	<ul style="list-style-type: none"> <li>▫ Minimize the given function <math>f(x)</math> by bisection method</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12) Test 1 (Week 9)
3	One dimensional unconstrained optimization: Cubic search, unrestricted search, Dichotomous search	CO-1	<ul style="list-style-type: none"> <li>▫ Minimize the given function <math>f(x)</math> by Quadratic search, Cubic search</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12)
4	Fibonacci method, Golden Section method, Newtons method, Modified Newtons method	CO-1	<ul style="list-style-type: none"> <li>▫ Minimize the given function <math>f(x)</math> by Fibonacci method/ Golden section method / Newtons method</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12) Test 1 (Week 9)
5	Non- linear multivariable optimization without constraints – Univariate method, Pattern search method, Rosenbrock’s rotating coordinates method	CO-2	<ul style="list-style-type: none"> <li>▫ Outline of Univariate method, Pattern search method, Rosenbrock’s rotating coordinates method</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Q&A session (Week 6)
6	Non- linear multivariable optimization without constraints – Hooke & Jeeves method and Powells method, Newtons method and steepest descent method	CO-2	<ul style="list-style-type: none"> <li>▫ Minimize <math>f(X)</math> by Newtons method</li> <li>▫ Minimize <math>f(X)</math> by steepest descent method</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Test 1 (Week 9)
7	Multivariable with equality constraints, direct substitution method, method of Lagrange multipliers	CO-2	<ul style="list-style-type: none"> <li>▫ Minimize <math>f(X)</math> subject to constraint <math>h(X)=0</math> by direct substitution method</li> <li>▫ Minimize <math>f(X)</math> subject to constraint <math>h(X)=0</math> by method of Lagrange multipliers</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12) Test 1 (Week 9)
8	Non-linear multivariable optimization with constraints: Penalty approach- Interior and exterior penalty function methods	CO-2	<ul style="list-style-type: none"> <li>▫ Compare the exterior and interior penalty function methods</li> <li>▫ Minimize given <math>f(X)</math> subject to constraints using interior penalty function approach</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12) Test 2 (Week 18)
9	<b>Test 1</b>				
10	Geometric programming (GP): Solution by differential calculus; GP: Arithmetic-geometric inequality; Optimization of zero degree difficulty problems without constraints	CO-3	<ul style="list-style-type: none"> <li>▫ Give examples of posynomial functions</li> <li>▫ Derive orthogonality and normality conditions in solving GP problem</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/ Discussion</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12)
11	Optimization of zero degree difficulty problems with constraints	CO-3	<ul style="list-style-type: none"> <li>▫ Minimize the given function <math>f(X)</math> subject to the given constraints using GP</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture</li> <li>▫ Problem solving</li> </ul>	Assignment (Week 5-12) Test 2 (Week 18)
12	Optimization of single degree difficulty problems without constraints	CO-3	<ul style="list-style-type: none"> <li>▫ Minimize the given function <math>f(X)</math> subject to the given constraints using GP</li> </ul>	<ul style="list-style-type: none"> <li>▫ Problems solving</li> <li>▫ Seminars</li> </ul>	Assignment (Week 5-12)
13	Genetic algorithms (GA): Principle, reproduction & crossover operators, mutation, termination criteria	CO-4	<ul style="list-style-type: none"> <li>▫ Discuss the basic operations used in GAs</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture</li> <li>▫ Power Point Presentation</li> </ul>	Test 2 (Week 18)
14	GA for constrained optimization, drawbacks of GA	CO-4	<ul style="list-style-type: none"> <li>▫ Discuss in detail how the operations are performed for constrained optimization</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture</li> <li>▫ Power Point Presentation</li> </ul>	Report (Week 14 - 18)
15	Basic concepts of stochastic programming	CO-5	<ul style="list-style-type: none"> <li>▫ Demonstrate stochastic dynamic programming</li> </ul>	<ul style="list-style-type: none"> <li>▫ Lecture/Discussion</li> <li>▫ Power Point Presentation</li> </ul>	Report (Week 14 - 18)
16	Basic concepts of Multi-stage optimization and Multi-objective optimization	CO-5	<ul style="list-style-type: none"> <li>▫ Outline the basic concepts of Multi-stage optimization and Multi-objective optimization</li> </ul>	<ul style="list-style-type: none"> <li>▫ Discussion</li> <li>▫ Problems solving</li> <li>▫ Seminars</li> </ul>	Report (Week 14 - 18)
17	Engineering applications: Minimization of weight of a cantilever beam, truss, shaft; optimal design of springs	CO-5	<ul style="list-style-type: none"> <li>▫ Design optimization of springs</li> <li>▫ Design of a truss for minimum weight</li> <li>▫ Design of a beam/shaft for minimum weight</li> </ul>	<ul style="list-style-type: none"> <li>▫ Discussion</li> <li>▫ Problems solving</li> <li>▫ Seminars</li> </ul>	Report (Week 14 - 18) Test 2 (Week 18)
18	<b>Test 2</b>				
19/20	<b>END EXAM</b>
