

COMPUTER ORGANIZATION AND ARCHITECTURE**Course Code: 13CS2102****L P C**
4 0 3**Pre requisites: Advanced computer Architecture****Course Educational Objectives:**

To give detailed information about the structure of computers and internal Organization of different units regarding memory I/O devices registers.

Course Outcomes:

By the end of the course students

- Will be able to learn Computer structure, parallel processing, pipelining, Multicomputer and multiprocessors.
- Will understand a wide variety of memory technologies both internal and external.
- Will understand the role of the operating system in interfacing with the computer hardware.
- Will understand the basic components of the CPU including the ALU and control unit
- Will gain the knowledge on new concept of Multicore computer is introduced in this syllabus. Students will learn current present processors' architecture like Pentium, ARM.

UNIT - I

Overview of computer organization: Introduction, Programmer's view, Architect's view, Implementer's view, Te processor, Memory, Input/output. (Text Book 2)

Instruction Sets: Machine Instruction Characteristics, Types of Operands, Intel X86 and ARM Data Types, Types of Operations, Intel X86 and ARM Operation Types, Addressing, x86 and ARM Addressing Modes, Instruction Formats, x856 and ARM Instruction Formats, Assembly Language. (Text Book1)

UNIT – II

Processor Structure and Function: Processor Organization, Register Organization, The Instruction Cycle, The x86 Processor Family, The ARM Processor. (Text Book1)

RISC Processors: Introduction, Evolution of CISC Processors, RISC Design Principles. (Text Book2)

UNIT – III

Cache Memory: Introduction, How Cache Memory Works, Why Cache Memory Works, Cache Design Basics, Mapping Function, Replacement Policies, Write Policies, Space Overhead, Mapping Examples, Types of Cache Misses, Types of Caches.

Input/Output Organization: Accessing I/O Devices, I/O data Transfer, External Interface, Universal Serial Bus. (Text Book2)

UNIT – IV

Pipelining and Vector Processing: Basic Concepts, Handling Resource Conflicts, Data Hazards, Handling Branches, Performance Enhancements, Pentium Implementation, Vector Processors, Performance. (Text Book2)

Instruction-Level Parallelism and Superscalar Processors: Overview, Design Issues, Pentium4, ARM Cortex-A8. (Text Book1)

UNIT – V

Parallel Processing: The Use of Multiple Processors, Symmetric Multiprocessors, Cache Coherence and the MESI protocol, Multithreading and Chip Multiprocessors, Clusters, Non Uniform Memory Access Computers, Vector Computation. (Text Book1)

Multicore Computers: Hardware Performance Issues, Software Performance Issues, Multicore Organization, Intel x86 Multicore Organization, ARM11 MPCore. (Text Book1)

Text Books:

1. William Stallings, “Computer Organization and Architecture Designing for Performance”, 8th Edition, Pearson Education, 2010.
2. Sivarama P.Dandamudi, “Fundamentals of Computer Organization and Design”, International Edition, Springer, 2009.
